Introduction

1.1 General Information

This document is intended as a template and guideline and should support the author in the course of doing the master's thesis. Assessment criteria comprise the quality of the theoretical and/or practical work as well as structure, content and wording of the written master's thesis. Careful attention should be given to the basics of scientific work (e.g., correct citation).

1.2 Organizational Issues

A master's thesis at the Faculty of Informatics has to be finished within six months. During this period regular meetings between the advisor(s) and the author have to take place. In addition, the following milestones have to be fulfilled:

1. Within one month after having fixed the topic of the thesis the master's thesis proposal has to be prepared and must be accepted by the advisor(s). The master's thesis proposal must follow the respective template of the dean of academic affairs. Thereafter the proposal has to be applied for at the deanery. The necessary forms may be found on the web site of the Faculty of Informatics. <http://www.informatik.tuwien.ac.at/dekanat/formulare.html>
2. Accompanied with the master's thesis proposal, the structure of the thesis in terms of a table of contents has to be provided.
3. Then, the first talk has to be given at the so-called "Seminar for Master Students". The slides have to be discussed with the advisor(s) one week in advance. Attendance of the "Seminar for Master Students" is compulsory and offers the opportunity to discuss arising problems among other master students.

4. At the latest five months after the beginning, a provisional final version of the thesis has to be handed over to the advisor(s).
5. As soon as the provisional final version exists, a first poster draft has to be made. The making of a poster is a compulsory part of the “Seminar for Master Students” for all master studies at the Faculty of Informatics. Drafts and design guidelines can be found at <http://www.informatik.tuwien.ac.at/studium/richtlinien>.
6. After having consulted the advisor(s) the second talk has to be held at the “Seminar for Master Students”.
7. At the latest six months after the beginning, the corrected version of the master’s thesis and the poster have to be handed over to the advisor(s).
8. After completion the master’s thesis has to be presented at the “epilog”. For detailed information on the epilog see:
<http://www.informatik.tuwien.ac.at/studium/epilog>

1.3 Structure of the Master’s Thesis

If the curriculum regulates the language of the master’s thesis to be English (like for “Business Informatics”), the thesis has to be written in English. Otherwise, the master’s thesis may be written in English or in German. The structure of the thesis is predetermined. The table of contents is followed by the introduction and the main part, which can vary according to the content. The master’s thesis ends with the bibliography (compulsory) and the appendix (optional).

- Cover page
- Acknowledgements
- Abstract of the thesis in English and German
- Table of contents
- Introduction
 - motivation
 - problem statement (which problem should be solved?)
 - aim of the work
 - methodological approach
 - structure of the work
- State of the art / analysis of existing approaches
 - literature studies

- analysis
 - comparison and summary of existing approaches
- Methodology
 - used concepts
 - methods and/or models
 - languages
 - design methods
 - data models
 - analysis methods
 - formalisms
- Suggested solution/implementation
- Critical reflection
 - comparison with related work
 - discussion of open issues
- Summary and future work
- Appendix: source code, data models, ...
- Bibliography
